

# Stack Size

This is a class called Stack which is the same class that was described at the end of the Week 13 lectures (and its associated Node helper class). Please add a member function named `size` that returns an int indicating the number of elements contained in the stack. Please be sure to only edit the implementation file (StackSize/Stack.cpp) as no changes to the header file will be permitted.

Please see the main.cpp file for an example test case that you can compile and run.
